EDUCATION

Bachelor of Computer Science

Carleton University

Algorithms Stream, Minor in Mathematics, GPA 3.6

Sept 2021 – Apr 2025

Ottawa, ON

SKILLS AND FRAMEWORKS

- Programming Languages: Java, Python, C++, C, JavaScript, Haskell, SQL, HTML, C#, CSS
 - Experience with Linux, Shell Scripting, Git, Java FX, Node JS, Power Automate, SharePoint
 - Knowledge of: Database Management, Web Development, Network Protocols, Operating Systems, Algorithms, Data Structures, Distributed Algorithms
-

WORK EXPERIENCE

Teaching Assistant – Programming Paradigms & Algorithms

Sept 2024 – Apr 2025

Carleton University

Ottawa, ON

- Supported students struggling with concepts like recursion. Led office hours to provide academic support to ensure students could be as successful as possible
- Recognized need for supplementary learning material and created material to give students more opportunities to deepen their understanding of complex course material

AI Trainer – Coding/Math Models

Apr 2024 – Aug 2024

Data Annotation

Ottawa, ON

- Trained AI models to create readable and correct code to solve users' problems and meet their project requirements
- Worked with a variety of programming languages on a variety of projects such as building websites, creating GUIs, data generation/analysis, and logical and mathematical reasoning libraries to ensure that the models were able to provide high quality responses for many different query areas

IT Developer Student

May 2023 – Apr 2024

Transport Canada

Ottawa, ON

- Led development of a user-friendly agenda planner supported by automations that aimed to streamline agenda item management and enhance collaboration and communication among government committees
 - Provided training and support to end-users, enabling seamless adoption of the agenda planner system, and received positive feedback for the effectiveness and efficiency of the agenda planner
 - Designed and implemented solutions to automate the current staffing action approval process for the department which reduced the approval time by 75% using Power Automate
-

PROJECTS

Neureset EEG Treatment Simulator | Software Engineering Course *Qt/C++, Git*

Worked in an Agile development team of software developers to create a simulation of a medical device which uses electronic signals from the brain to diagnose and treat conditions. Led weekly meetings to discuss progress in our respective areas and plan our next sprint. Developed readable and maintainable code and performed code reviews for seamless integration and consistent quality across the team.

Scheduling Program | CUSERT (Carleton Emergency Response Team) *Java*

Created a fully automated scheduling tool using object-oriented programming in Java to track and coordinate each volunteer's schedule. Developed a customized algorithm to meet minimum staffing requirements and reduced the time required to make schedules from hours to minutes
